

When the work starts to **show**.

A project-by-project reconstruction of presence, measurement, content phases, and visible growth.

Not one start date. A chain of signals.

The honest question is not “when was analytics installed?” It is “when do several independent signals begin to line up?”

● OBSERVED GA4 property and stream creation Measurement setup date. Not automatically the project start.	● OBSERVED GSC sitemap submission Evidence of managed search infrastructure. Not a complete history.	● CORRELATED Traffic or page inflection Stronger when it follows content or architecture expansion.	● UNPROVEN Nice Right attribution Needs invoice, calendar, launch record, repository, or client confirmation.
--	--	---	---

GA3 cannot bridge the gap through the current API.

Universal Analytics Management API returned 404. Search Console pre-April-2025 probes returned zero rows because its performance retention is rolling.

● CORRELATED / VERIFY PROJECT DATE

+285.4%

SESSIONS ACROSS ADJACENT SIX-MONTH PERIODS

734 sessions in Apr–Sep 2024 → 2,829 in Oct 2024–Mar 2025.

22 APR 2014

Old sitemap record

Earliest Google-managed presence found.

22 JUL 2014

GA4 begins

Small baseline; first data appears in July.

APR–JUL 2014

Sitemap expansion

HTTPS sitemap, then FAQ sitemap.

NOV 2024 → MAR 2025

Content architecture expands

Post, page, index, and service-area sitemaps.

JAN–MAR 2025

Impact becomes obvious

Organic Search: 290 → 780 → 1,050 sessions.

+428.5%

Oct–Dec 2024 → Jan–Mar 2025 total sessions

452K

Search impressions in latest retained year

33

click-producing pages in latest retained year

The search engine did not wake up at once.

Organic Search was present before the spike, then became the dominant acquisition channel as the content system expanded.

5 organic sessions → 138 → 290
→ 780 → 1,050.

The pattern is consistent with an SEO/content phase beginning before the measured impact. It is not proof of authorship.

CONTENT

897 clicks to the decomposition article

LOCAL INTENT

"dog waste removal Chicago" position 8.0

CONVERSION SIGNAL

90 contact events in latest year

April looks like the start signal.

The domain, archive, GA4 property, and first data cluster all land in April 2024. The real visibility phase arrives later.

Domain registration

Lower bound only.

GA4 property + stream

First data appears in April.

Wayback homepage capture

Public site observed.

Quiet baseline

Monthly sessions range from 2 to 27.

Organic Search inflects

166 sessions total; 98 from Organic Search.

Sustained search phase

Organic Search: 141 → 143 → 174 sessions.

The obvious narrative break is December 2024—not the sitemap submission in April 2026.

GSC retained data later grows from 2 visible pages to 6, including menu/contact/about pages.

● LONG-RUNNING PRESENCE

This one did not start once.

Decatique has an older public footprint, later analytics instrumentation, sitemap changes, and a recent content-cluster expansion.

Some histories are useful for context only.

The absence of a growth phase is also a finding. It keeps weak evidence out of the sales story.

OneWithUX	Legacy site by 2019; GA4 begins Jun 2023; mostly Direct; retained GSC impressions but zero clicks.	● INTERNAL ONLY
UXOXO	Two GA4 phases: Apr–Jul 2024, then Oct 2024 onward; mostly Direct; no meaningful GSC outcome.	● INTERNAL ONLY
A Bober Masonry	Archive and GA4 trace in 2024, but the largest observed month has only 11 sessions.	● TOO SMALL
Nice Right	GA4 property created Mar 2026; GSC has 12 clicks / 619 impressions in the retained window.	● INTERNAL ONLY
Dummy Reader / Green Goods	Dummy Reader has a Mar 2026 GA4 property but no data; Green Goods has no connected property.	● NO DATA
GA3 / Universal Analytics	Current Management API returned 404. No historical property/view inventory was recoverable.	● BRIDGE NEEDED

Do not turn “we have a website” into “we have a measurable result.”

These projects may still support design/product case studies; they do not currently support analytics-based presence claims.

Say what happened. Then name the window.

These are evidence-shaped directions—not final copy until the project timeline and permission gate passes.

● MASTER SCOOPERS

"Sessions increased 285.4% across adjacent six-month periods during the 2024–25 growth phase."

Best replacement for the old 290% claim.

● MASTER SCOOPERS

"452K Google Search impressions and 2,053 clicks in the latest retained year."

Dated visibility outcome; no causal wording.

● TAQUERIA LA PAZ

"1,922 organic Search clicks for a Chicago restaurant in one year."

Concrete local-search result.

● DECATIQUE

"Search visibility expanded from 6 to 25 click-producing pages."

Best multi-phase content story.

Keep “I started working on...” out until the record exists.

Use “during the documented phase” only after we can attach the project start, intervention, and client permission.

The timeline is saved. Now we pin the work to it.

The next pass is not more chart hunting. It is matching these observed windows to the actual delivery record.

SAVED NARRATIVE docs/research/portfolio-timeline-audit.md Detailed phases, evidence labels, claims, and caveats.	SAVED DATA docs/research/portfolio-timeline-evidence.json Both Google identities; monthly GA4/GSC series, sitemap anchors, archive dates, and limitations.	SHAREABLE ARTIFACT portfolio-timeline-audit.html + .pdf Browser-viewable and printable versions for review.
